PROJECTS

- DIGITAL TWIN INTEGRATION OF A CIRCULAR FLUIDISED BED GASIFIER – CYCLONE SEPARATOR SYSTEM (June'25 - Current)**

Designing and fabricating a sensor-integrated circular fluidized bed gasifier system to generate energy from sawdust. The setup includes a cyclone separator with robust airflow and fuel flow. Key process parameters—temperature, humidity, and gas composition—are monitored in real-time and fed into a **Digital Twin interface for system visualization**. Additionally, I have integrated a **Retrieval-Augmented Generation (RAG) agent** that serves as an interactive project expert. This AI acts as a conversational assistant, capable of answering queries about the project.

- License Plate Detection using YOLOv8 + EASYOCR**

Fine-tuned YOLOv8 detection model for license plate using a custom dataset of 300+ samples and achieved 92% accuracy in IoU validation.

- Material Hardness Prediction (ML Project)**

Built regression model using Scikit-learn and Pandas to predict material hardness.
